

Excel

Creating Simple Formulas

Did you know that Excel can be used to calculate numerical information? In this lesson, you will learn how to create simple math formulas in Excel, e.g., add, subtract, multiply, and divide values.

The screenshot shows an Excel spreadsheet with a window titled 'SUM'. The spreadsheet has two columns, A and B, and rows 1 through 8. Column A contains the text 'Total' in row 3. Column B contains numerical values: '\$ 400.00' in row 1, '\$ 300.00' in row 2, and the formula '=B1+B2' in row 3. The formula bar at the top shows the formula being entered in cell B3.

	A	B
1		\$ 400.00
2		\$ 300.00
3	Total	=B1+B2
4		
5		
6		
7		
8
